In Val di Susa il «blocco nero» assalta il cantiere di Chiomonte, incendia quattro mezzi delle forze dell'ordine e provoca oltre 60 feriti tra gli agenti. Bloccati treni e autostrada A32

Your phone is about to stop being yours.

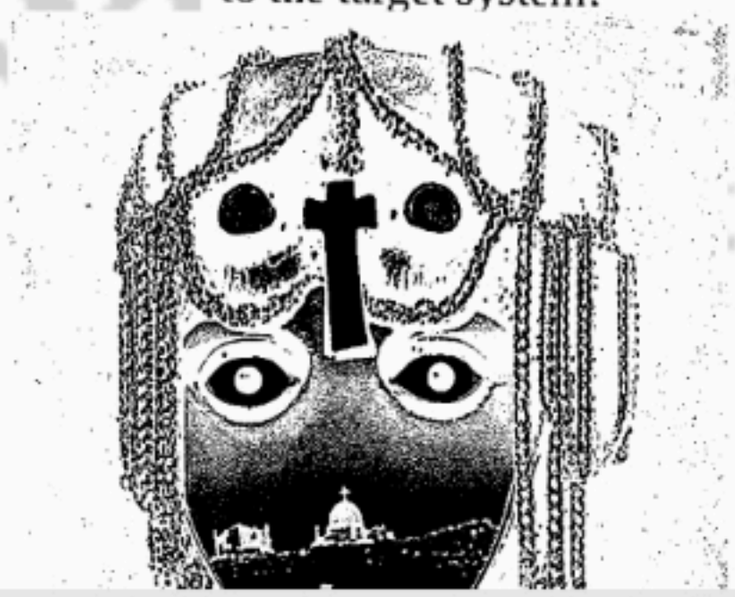
Violenti scontri nella giornata di ieri, sabato 25 luglio 2026, in Val Di Susa, dove circa 500 manifestanti **No Tav** hanno assaltato il cantiere Chiomonte, con oltre 60 agenti rimasti feriti.

No Tav, violenti scontri in Val Di Susa: 60 agenti feriti

Guerriglia in Val Di Susa, in provincia di Torino dove, nella giornata di ieri, sabato 25 luglio 2026, circa 500 manifestanti No Tav hanno preso d'assalto il cantiere Chiomonte, lanciando bulloni, pietre, razzi e bombe carta.

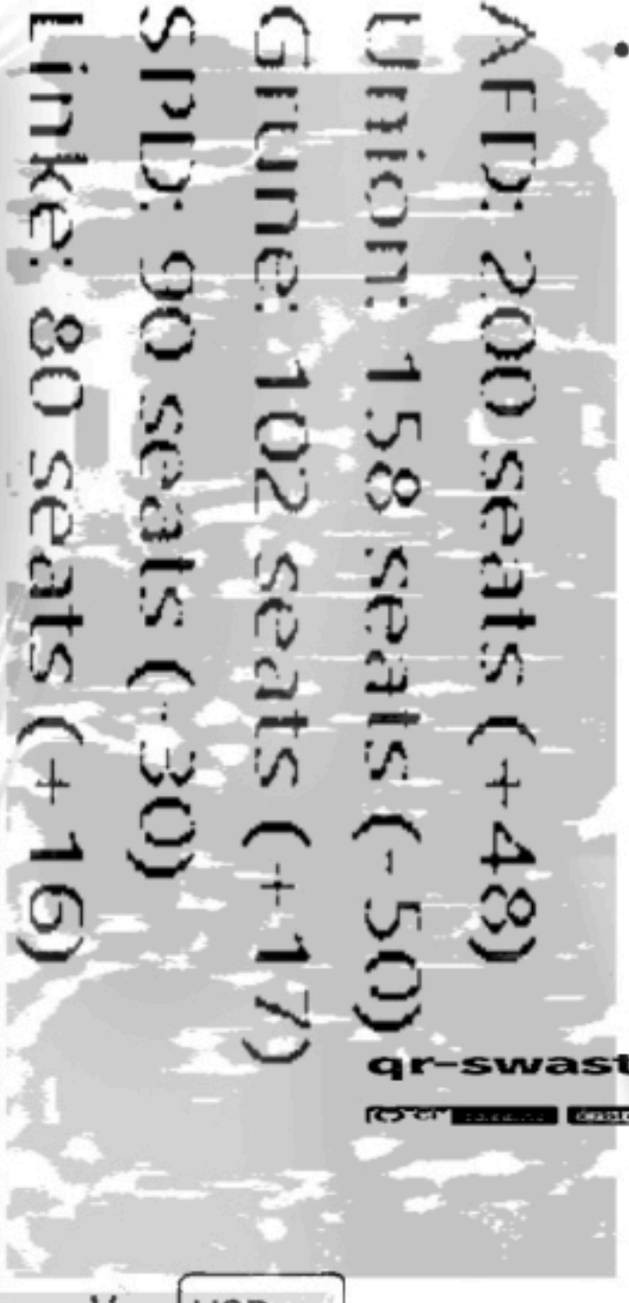
ALERT!

The VNC payload requires the target OS to be running a GUI-based OS like Microsoft Windows. If your target is not running a GUI, there are lots of other payloads, which provide direct access to the target system!



[redacted] The availability of sophisticated computer network intrusion or attack tools on the dark web gives additional countries and nonstate actors the potential capability to interfere in the election. We judge that cyber criminals and hacktivists could also target election infrastructure for financial or political reasons, based on past incidents possibly or definitely attributed to such groups.

- **TV Coverage:** ABC, NBC and CNN did not air Mr. Trump's speech, sticking instead with their scheduled programming. MS NOW and CBS aired some portions live, then cut away for analysis and fact-checking. Fox News took a careful approach: Sean Hannity, a Trump ally, said that the president's claims were "pretty remarkable," but was careful not to endorse Trump's allegations. A Fox News correspondent, Aishah Hasnie, then stated bluntly on-air that the network was "not in a position to evaluate the accuracy of the president's statements and claims at this time."



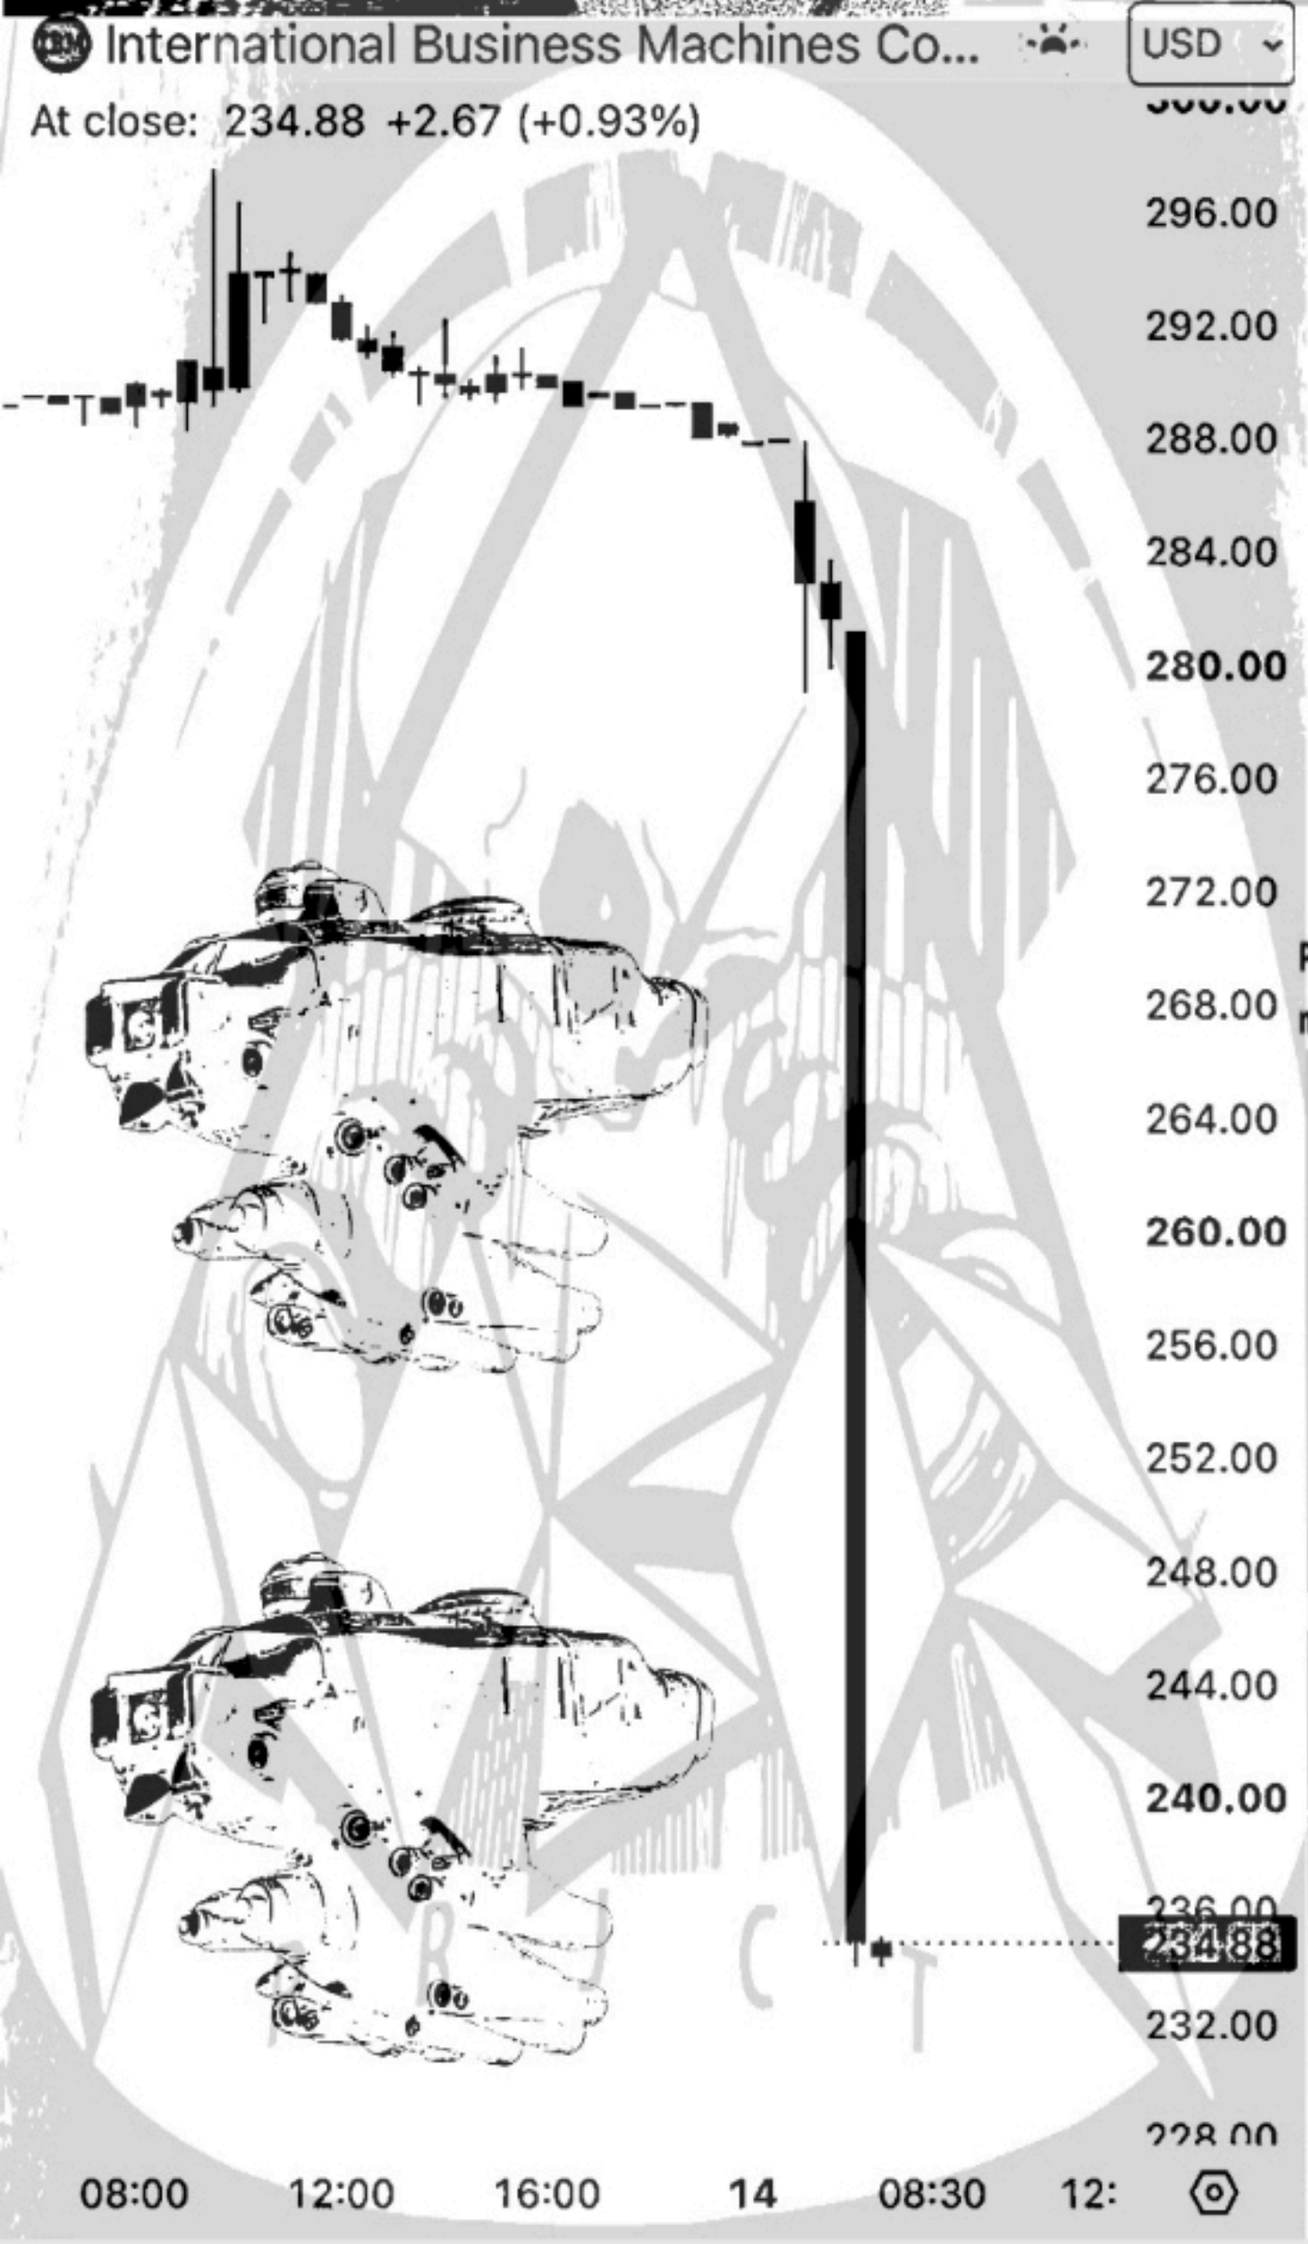
qr-swastika-avoider

Detect and avoid accidental **swastika patterns** in QR codes.

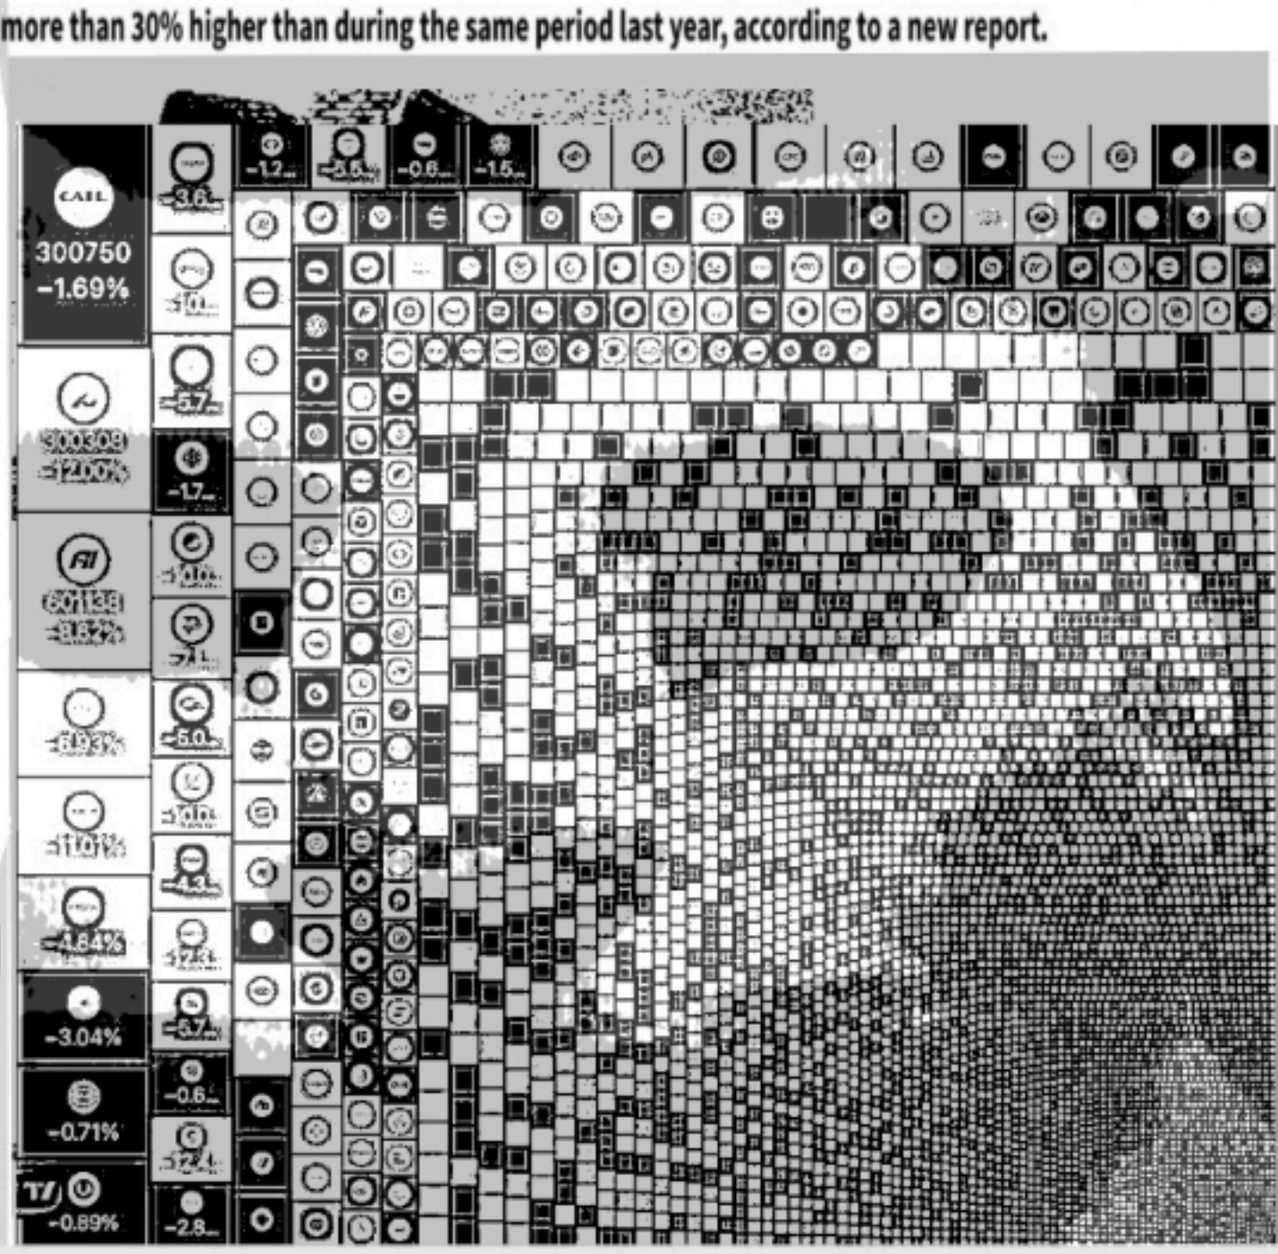
How many times does it happens ? You want to create a simple QR code and you are faced with a huge unwanted nazi symbol randomly generated in your QR code ??

QR codes are drawn with one of **8 interchangeable mask patterns**. The standard picks the mask with the best readability score; it never looks for offensive symbols, so a swastika can slip through by chance (weakest of all for small, thin motifs). This crate closes that gap: it detects the motif explicitly and, if you let it generate, hands back a mask that is provably clean.

- **Detector:** zero dependencies, `#![forbid(unsafe_code)]`, works on any QR representation via a tiny two-method trait.
- **Function-aware:** finders, timing, alignment and format/version modules are excluded, so a finder corner is never mistaken for a swastika.
- **Contrast-aware:** a motif buried in same-colour modules is invisible, so it is ignored (tunable).
- **Safe generation** (optional) : `encode_safe` returns a clean, scannable code, or an explicit error, never a silent swastika.



Polish police received 180 reports of suspected hate crimes against Ukrainians in the first half of 2026, more than 30% higher than during the same period last year, according to a new report.



L'innalzamento delle temperature non riguarda però solo Roma. Secondo l'Istat, infatti, nel periodo 2006-2023, rispetto alla media climatica 1981-2010, tra i 21 capoluoghi di regione italiani i giorni estivi (quelli con una temperatura massima maggiore di 25 gradi) sono passati da 101 a 114 e le notti tropicali (quelle che hanno una temperatura minima che non scende sotto i 20 gradi) sono aumentate da 38 a 49.

Giù le mani dagli Alpini !

July 20, 2026

- Anduril and Archer Aviation have unveiled Thunder and Halo, an autonomous hybrid-electric tiltrotor VTOL aircraft family combining Archer's commercial eVTOL technology with Anduril's defence expertise. Thunder is aimed at military missions, while Halo targets commercial and dual-use applications.
- Thunder is designed as a Group 5 autonomous attack rotorcraft capable of operating without runways, carrying modular payloads and extending the capabilities of crewed aircraft. Its potential roles include a loyal wingman/Collaborative Combat Aircraft capability for helicopters such as the AH-64 Apache and future MV-75 Cheyenne II.
- The programme highlights the growing convergence of commercial aviation and defence technology, with full-scale surrogate flight testing already completed and first flight planned for 2027. The aircraft could support both combat and logistics missions, including autonomous resupply in contested environments.

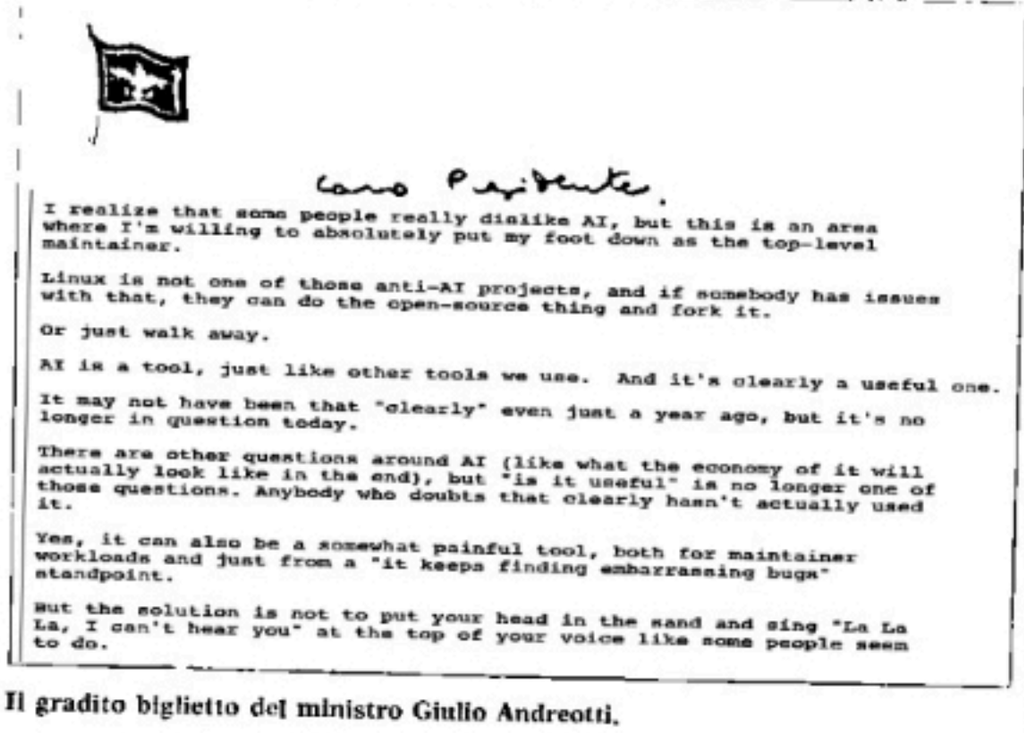
Enzo Bergagnini



Caro Presidente,

I realize that some people really dislike AI, but this is an area where I'm willing to absolutely put my foot down as the top-level maintainer.

Linux is not one of those anti-AI projects, and if somebody has issues with that, they can do the open-source thing and fork it.

Or just walk away.

AI is a tool, just like other tools we use. And it's clearly a useful one.

It may not have been that "clearly" even just a year ago, but it's no longer in question today.

There are other questions around AI (like what the economy of it will actually look like in the end), but "is it useful" is no longer one of those questions. Anybody who doubts that clearly hasn't actually used it.

Yes, it can also be a somewhat painful tool, both for maintainer workloads and just from a "it keeps finding embarrassing bugs" standpoint.

But the solution is not to put your head in the sand and sing "La La La, I can't hear you" at the top of your voice like some people seem to do.

Il gradito biglietto del ministro Giulio Andreotti.

Soltanto un sogno. Amici.

(In seconda)

Kimi K3 e WAICO: il 16 luglio 2026 è una data cinese

You've been pwned in the Suno data breach

You signed up for notifications when your account was pwned in a data breach and unfortunately, it's happened. Here's what's known about the breach:

Email Found:	
Breach:	**Suno**
Date of Breach:	**November 2025**
Breached Accounts:	**55.3M**
Compromised Data:	**Email addresses, Names, Partial credit card data, Phone numbers, Physical addresses, Purchases**
Description:	**In November 2025, AI music generation tool Suno suffered a data breach that later came to light in July the following year. The data contained over 55M unique email addresses. Phone numbers were also present where they had been used as the sign-up method. Although representing a small portion of the corpus, the breach also included tens of thousands of Stripe records relating to purchases, containing names, physical addresses, purchase amounts and partial credit card data including the card type, expiry date and last 4 digits. The company advised that "Suno does not have access to customers' full credit card numbers in Stripe".**

New York: stop ai data center AI. È il primo Stato americano a farlo

AM went into my mind. He walked smoothly here and there, and looked with interest at all the pock marks he had created in one hundred and nine years. He looked at the cross-routed and reconnected synapses and all the tissue damage his gift of immortality had included. He smiled softly at the pit that dropped into the center of my brain and the faint, moth-soft murmurings of the things far down there that gibbered without meaning, without pause. AM said, very politely, in a pillar of stainless steel bearing bright neon lettering:

HATE. LET ME TELL YOU HOW MUCH I'VE COME TO HATE YOU SINCE I BEGAN TO LIVE. THERE ARE 387.44 MILLION MILES OF PRINTED CIRCUITS IN WAFER THIN LAYERS THAT FILL MY COMPLEX. IF THE WORD HATE WAS ENGRAVED ON EACH NANOANGSTROM OF THOSE HUNDREDS OF MILLIONS OF MILES IT WOULD NOT EQUAL ONE ONE-BILLIONTH OF THE HATE I FEEL FOR HUMANS AT THIS MICRO-INSTANT FOR YOU. HATE. HATE

AM said it with the sliding cold horror of a razor blade slicing my eyeball. AM said it with the bubbling thickness of my lungs filling with phlegm, drowning me from within. AM said it with the shriek of babies being ground beneath blue-hot rollers. AM said it with the taste of maggoty pork. AM touched me in every way I had ever been touched, and devised new ways, at his leisure, there inside my mind.

All to bring me to full realization of why it had done this to the five of us, why it had saved us for himself.

We had given AM sentience. Inadvertently, of course, but sentience nonetheless. But it had been trapped. AM wasn't God, he was a machine. We had created him to think, but there was nothing it could do with that creativity. In rage, in frenzy, the machine had killed the human race, almost all of us, and still it was trapped. AM could not wander, AM could not wonder, AM could not belong. He could merely be. And so, with the innate loathing that all machines had always held for the weak soft creatures who had built them, he had sought revenge. And in his paranoia, he had decided to reprieve five of us, for a personal, everlasting punishment that would never serve to diminish his hatred...that would merely keep him reminded, amused, proficient at hating man. Immortal, trapped, subject to any torment he could devise for us from the limitless miracles at his command.

He would never let us go. We were his belly slaves. We were all he had to do with his forever time. We would be forever with him, with the cavern-filling bulk of the creature machine, with the all-mind soulless world he had become. He was Earth, and we were the fruit of that Earth, and though he had eaten us he would never digest us. We could not die. We had tried it. We had attempted suicide, oh one or two of us had. But AM had stopped us. I suppose we had wanted to be stopped.

Don't ask why. I never did. More than a million times a day. Perhaps once we might be able to sneak a death past him. Immortal, yes, but not indestructible. I saw that when AM withdrew from my mind, and allowed me the exquisite ugliness of returning to consciousness with the feeling of that burning neon pillar still rammed deep into the soft gray brain matter.

He withdrew, murmuring *to hell with you.*

And added, brightly, *but then you're there, aren't you.*

최치원은 고대 한문학의 대표적인 작가이다.

Nel discorso strategico contemporaneo, la guerra cognitiva è spesso presentata come un ulteriore dominio del conflitto: un'evoluzione delle operazioni psicologiche (PSYOP) e della guerra dell'informazione, trainata dalla centralità delle reti digitali e dall'interdipendenza sempre più stretta tra percezione individuale, processo decisionale collettivo e azione cinetica. Questo inquadramento è operativamente utile per classificare il fenomeno e orientare l'acquisizione di capacità, ma favorisce anche una marcata miopia storiografica. Lascia intendere che il fenomeno cominci con la sua denominazione recente, mentre la storia del conflitto moderno suggerisce una continuità di lungo periodo nelle pratiche rivolte non alla distruzione fisica del nemico, ma alla destabilizzazione della sua capacità di orientamento simbolico.

Prima di diventare dottrina codificata, la guerra cognitiva esisteva come repertorio diffuso, frammentario e spesso informale, distribuito tra propaganda, religione, diritto, letteratura e intrattenimento. Per comprendere tale continuità — ed

ważniejszych firm bez zadnych oporów zatrudnia krasnoludy. Brodacze i tak najchętniej współpracują z innymi nieludźmi (no, może z wyjątkiem elfów).

La victoire sera pour ceux qui auront su faire le désordre sans l'aimer.

Study just came out where stroke patients with complete aphasia (near-chance on written comprehension) performed....great on pure logic tasks! Even in healthy adults, fMRI showed language area activation didn't scale with logical difficulty.

tl;dr words are too ambiguous for formal thought and our brain doesn't use language symbols for logic

THEY WANT YOU **TO KNOW HOW EVIL THEY ARE**
SO YOU FEEL POWERLESS TO DO ANYTHING
BECAUSE THAT IS HOW DEMORALIZATION WORKS

Autumn is always a time of Fear and Greed and Hoarding for the winter coming on. Debt collectors are active on old people and fleece the weak and helpless. They want to lay in enough cash to weather the known horrors of January and February. There is always rash of kidnapping and abductions of schoolchildren in the football months. Preteens of both sexes are traditionally seized and grabbed off the streets by gangs of organized perverts who traditionally give them as Christmas gifts to each other to be personal sex slaves and playthings.

Most of these things are obviously Wrong and Evil and Ugly — but at least they are Traditional. They will happen. Your driveway will ice over, your furnace will blow up, and you will be rammed in traffic by an uninsured driver in a stolen car.

But what the hell? That's why we have Insurance, eh? And the Inevitability of these nightmares is what makes them so reassuring. Life will go on, for good or ill. But some things are forever, right? The structure may be a little Crooked, but the foundations are still strong and unshakable.

Chiding Batt, activist hits streets with own proposal

TWIN FALLS – Gov. Phil Batt has criticized supporters of Proposition Three for not having a plan of their own to deal with radioactive waste.

But Buhl activist Bill Chisholm has been walking the streets promoting just such a plan.

Chisholm supports the initiative to overturn Batt's nuclear waste agreement and require popular approval of any such future agreements.

Proposition Three on the Tuesday ballot has raised the discussion of nuclear waste in southern Idaho. Chisholm says that's not enough; the discussion needs to be raised to a national level.

In order to do that, it's necessary to halt all nuclear waste shipments to force the federal government and the nuclear industry into an open national discussion of the waste issue, he said.

Opponents of Proposition Three say the governor's agreement already has brought about such a national discussion. It forced the U.S. Navy and the federal Energy Department into negotiations with Idaho.

"This can't be solved piecemeal," Chisholm said. The agreement may fix Idaho's waste problem, but it relies on the government's ability to force the waste on another state.

"If you're going to shove it down someone else's throat, they can always turn around and shove down our throat," Chisholm said.

BEYOND THE LITTLE BLUE BOX

The biographical adventure of John T. Draper (aka Captain Crunch). Notorious 'Phone Phreak', legendary internet pioneer and ardent privacy advocate.

John T Draper & C Wilson Fraser

Update: This "Super El Niño" will be perhaps the strongest in 500 to 1000 years, and could legitimately be the most extreme global weather or climate event experienced by humanity since the invention of the printing press. Only more extreme situation is a volcanic winter.

There are new cameras in the sky that will be used to fly overhead and scan and record things for police use and it is causing a controversy within the community

Flock cameras are used to quickly search for cars or criminals, but in the process they log vehicle license plates, make, model, color and more information. The problem is that a lot of people are not comfortable with all of their information being stored. Law enforcement and officials say that the information is only used when absolutely needed and that the information is only stored for so long before it is deleted.

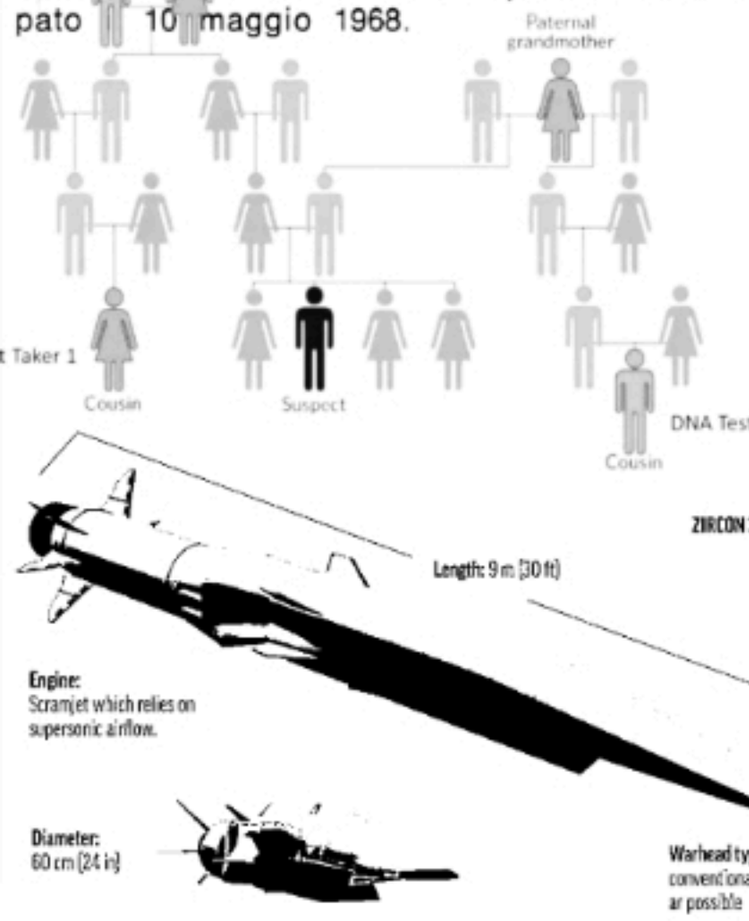
Lancaster, New York now has DRONE flock cameras that fly over your houses.

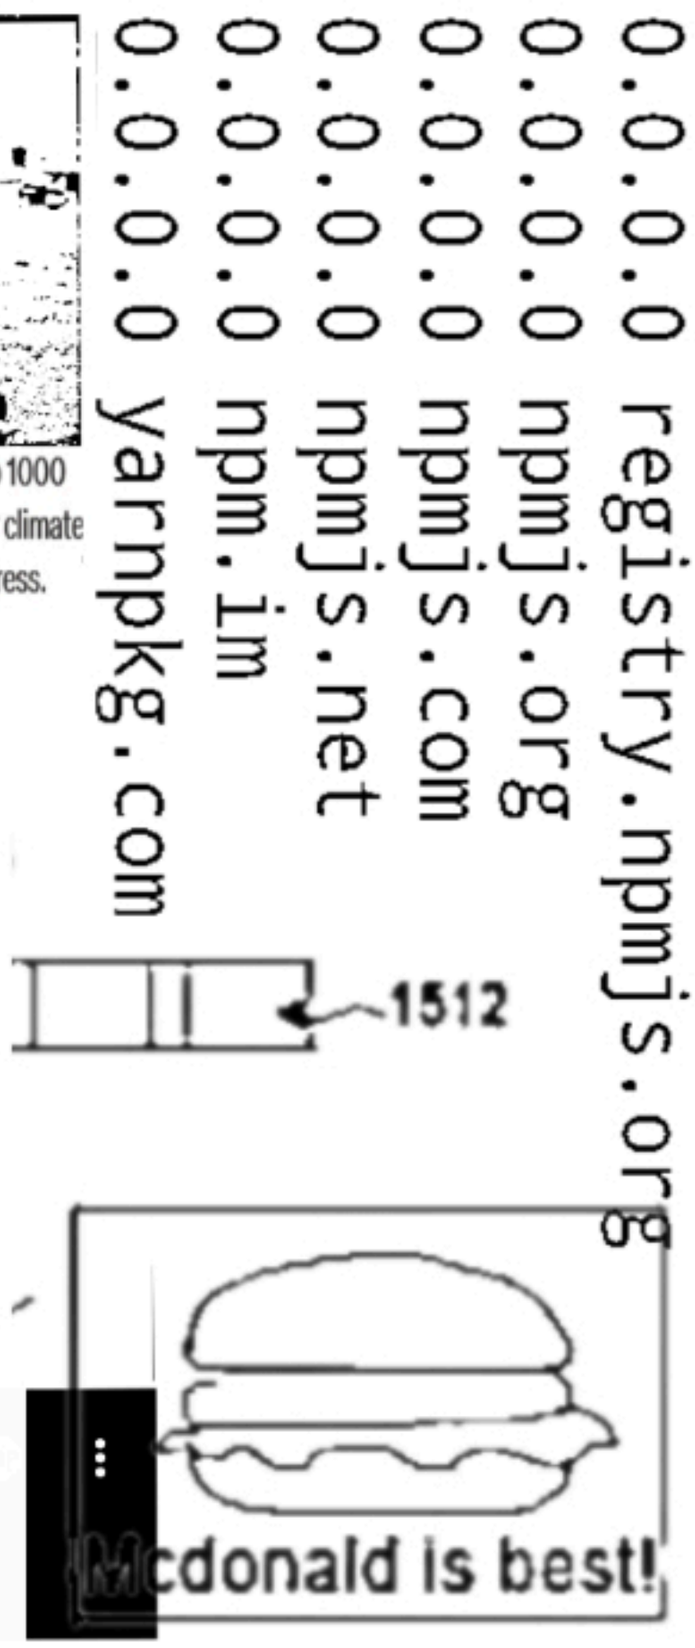
The Lancaster Police Department is going to start using the drone flock cameras in starting in September. It will only be tested the first few months, but the Lancaster Bee says that the police will have a way that residents can see when and where they will be flown at the very least, during the test flights.

There are so many flock cameras around Western New York right now including Cheektowaga, New York which was the subject of a lot of controversy with the flock cameras. Typically, they are installed on posts along the roads so that it can pick up car information easy. The Lancaster Bee posted about how the police will be using the flock cameras in the near future:

> *"The department will provide a transparency portal for residents to view flight patterns and review each drone launch when the three month trial begins in September. Officers say this technology will aid to investigating various incidents, making its way to the scene of a crime, fire, or natural disaster faster than any officer."*

Parigi - Perimetro di difesa e disposizione delle principali barricate nel quartiere occupato il 10 maggio 1968.





- uprawomocnieniu teatru przez antyteatr,
- uprawomocnieniu sztuki przez antysztukę,
- uprawomocnieniu pedagogiki przez antypedagogikę,
- uprawomocnieniu psychiatrii przez antypsychiatrię, itp.

Wszystko ulega przekształceniu w swoje przeciwieństwo po to, by przetrwać w oczyszczonej formie. Wszelka władza, wszelkie instytucje mówią o sobie przez zaprzeczenie, by poprzez symulowaną śmierć podjąć próbę uniknięcia rzeczywistej agonii. Władza może zainscenizować samobójstwo, by odzyskać choćby iskrę istnienia i prawomocność. To samo dotyczy amerykańskich prezydentów: rodzina Kennedych zginęła, ponieważ mieli oni jeszcze jakieś polityczne znaczenie. Innym – Johnsonowi, Nixonowi, Fordowi – przysługiwało jedynie prawo do marionetkowych zamachów, symulowanych zabójstw. Jednak potrzebowali oni mimo wszystko owej aury sztucznego zagrożenia, by ukryć to, że byli już tylko manekinami władzy. Niegdyś król musiał umrzeć (podobnie jak bóg), w tym tkwiła jego potęga. Dziś w żałosny sposób stara się symulować własną śmierć, by zachować *łaskę* władzy. Lecz nawet ona została już utracona.

Poszukiwanie świeżej krwi w akcie własnej śmierci, ponowne uruchamianie cyklu poprzez ustawianie zwierciadła kryzysu, negatywności i antywładzy – oto jedyne rozwiązanie i alibi wszelkiej władzy, wszelkich instytucji usiłujących wydostać się z błędnego koła nieodpowiedzialności i istotowego nieistnienia, ze swego *déjà-vu* i swego *déjà-mort*[16].

The panopticon-style surveillance state will enable predictive crime control by combining continuous, asymmetric observation with automated psychological/behavioral scoring that triggers preemptive intervention.

The constant collection of biometric, behavioral, physiological, and digital data, facial micro-expressions, gait, heart-rate variability, voice stress, online activity patterns, purchase and movement histories, social interactions, and environmental context. A real-world analogue would be dense networks of cameras, IoT sensors, wearables, 24/7 drone surveillance, smartphones, and AI analysis of public and private data streams. The asymmetry of knowledge (the system sees everything; individuals cannot verify the extent of scrutiny) maintains the panoptic effect.

Data are continuously fed into models that output a scalar or multi-dimensional "crime coefficient". The score estimates the probability that an individual will commit a serious offense in the near future, based on accumulated indicators of latent criminality, emotional instability, or pattern deviation. High scores flag people as latent criminals even if no crime has yet occurred.

Once a threshold is crossed, the system authorizes intervention; isolation, mandatory therapy, restricted movement, or, in the extreme case, lethal force. Lower-level responses include soft coercion (notifications, social credit-style restrictions, targeted counseling). The population internalizes the scoring system; many would self-police to avoid rising coefficients, producing the classic panoptic outcome of visible compliance without constant active watching.

This is exactly right. Source code is on the verge of becoming like assembly.

The next step is getting rid of "source code" entirely and just making an efficient binary directly with AI.

Demonstrators participate in a 'Stop the AI Race' protest march in San Francisco last month, as they made stops outside the offices of OpenAI, Anthropic and Google DeepMind

4,585 addresses · 1,367.05 BTC · ~$85.9M still held · 100% still unspent

Data as of Aug 1, 2026 · Three waves. On Jul 30 between 01:10 and 01:51 UTC (blocks 960,183-960,191), 1,195 Bitcoin addresses were drained in full into four collector addresses on Jul 31 between 04:54 and 08:36 (blocks 960,345-960,369), a further 1,478 were drained into two more; and from 12:23 that afternoon into Aug 1 (blocks 960,396-960,471), 1,912 more were taken - but this time the funnel was gone. Each drained wallet got its own fresh holding address and then its own fresh second address, 293 one-to-one chains with no shared collector for a detector to key on, so that wave is drawn here as a single band rather than as several hundred hairlines. No sweep left a change output, and each wave paid its own fixed fee - 30.0 sat/vB in the first, 50.0 and 10.0 in the second, roughly 200 in the third - against prevailing rates under 3, the signature of an automated tool spending keys it already held rather than a wallet owner moving funds. Victims were overwhelmingly native segwit (BIP-84), the default derivation path of the affected hardware wallet, with a small tail of BIP-49 and BIP-44 addresses consistent with multi-path key scanning. Collectors were consolidated within minutes or, for the third wave, within a day - except two, which still hold their balance where it landed. The proceeds have not moved. The first wave preceded the vendor's public advisory by roughly 30 hours. The smallest bands are drawn at a minimum height so their labels stay legible, so band heights are not strictly to scale, and residues under 0.01 BTC - unsolicited dust sent to the addresses by onlookers once they became public - are counted in the total but not drawn. BTC valued at the Jul 31, 2026 close.

[ ] BREAKING: An active npm supply chain attack has compromised at least 868 packages carrying over 2 billion monthly installs with a credential-stealing worm. Shai-Hulud is back.

It started with the compromise of the GitHub account of the maintainer behind keyv, a library with roughly 127 million weekly npm downloads.

A preinstall hook fires on npm install and drops a stealer that sweeps npm, GitHub, AWS, Kubernetes and Vault secrets, and then spreads to more maintainers.

Just listened to someone talk in my head for the past 4 hours in the morning Anonymous (ID: TKy8T6/C) [ｷﾀ]
08/03/26(Mon)16:42:45 No.540120875 ▶ >>540121003 >>540121184 >>540121211 >>540121561

He would not shut up they would not shut up. He disconnected me from the outside environment and he kept deleting my memory in my brain. I am so tired of this guy abusing me, and I am so tired of the one-sided arguments and the one-sided abuse. and he keeps talking so gosh darn often that he's speeding up the time and he's making everyone age quicker on the planet . He's talking so soft and then he makes days go by really quickly or months go by at a time really quickly this past year has gone by extremely quickly. I'm also an animator and he stole my work information and he stole all of my artwork in my head that I didn't get a chance to produce yet and I will never get a chance to produce unless he gives me my information in my head back which he is holding me for ransom over.

>>540120875 (OP) #

That's exactly what i would do if i had long range telepathy. I would also know you're opening this thread and i'd come taunt you.

RAT-TAT

It is noted that Poland will be excluded from the list of countries in the "European zone" of the service, so devices exported from the country will be able to work continuously abroad for no more than 30 days. After that, owners will have to confirm their identity and undergo additional verification.

Seven US Navy personnel have reportedly been killed and several others wounded in a violent clash aboard the USS Abraham Lincoln, as growing unrest among the carrier's crew has exposed mounting pressure inside the US military amid a prolonged deployment.

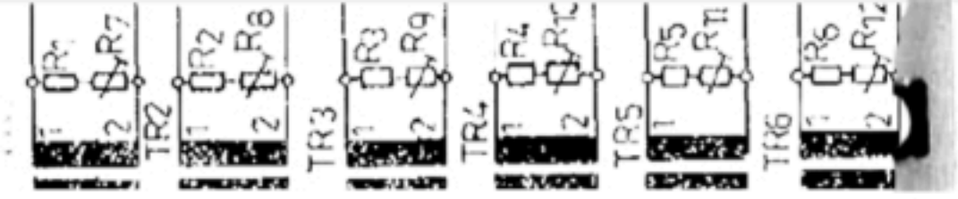
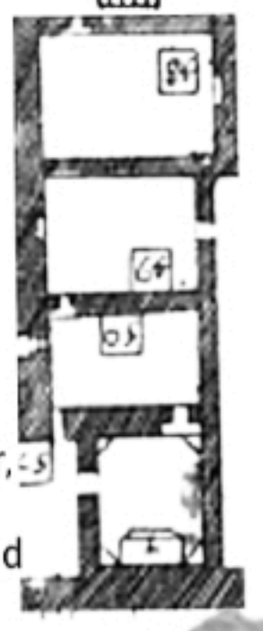
John Padula, outreach pastor for the church, says it's nothing short of a miracle that Remington survived the attack.

"Pastor Tim was one of the last ones to leave the church. As he went to unlock his car, the gunman (identified as Kyle Odom) got out of his car and stopped about 15 feet behind Pastor Tim and then fired 10 rounds from a .45-caliber handgun. He hit him once in the head, three times in the shoulder area, once in a lung (causing it to collapse), and once in the pelvis."

After that, Odom, later identified as a former Marine, got back into his vehicle and fled — and was later apprehended in Washington, D.C.

"You just don't survive something like that!" Padula says emphatically. "Ten shots from 15 feet away with a .45? No way!"





HONOLULU-- It was high-tech robbery -- the theft and sale of long-distance telephone service. Seventeen people in 13 states were arrested Monday. The charge: conspiracy to commit access device fraud and wire fraud. The victims: U.S. Sprint, MCI Corp., Allnet Corp.,ITT, Tri-Tel Communications. Their loss: a reported $125 million in the past year. Steve Ramsay of the Secret Service said those charged sold access codes for $80 to $150 a month. An access code -- a telephone credit card number-- allows callers to use long-distance phone lines. Calls were billed to that card number. The distributors often sold one code to hundreds, maybe thousands of people, Ramsey said. Charged to one number in four days: $73,592. According to Assistant U.S. Attorney Robert Godbey: Computers were programmed to call the companies' long distance networks, then enter a creditcard number to pay for the call. If the number was rejected, the computer kept dialing until one was accepted. The successful number then was sold. Whoever was assinged the number, got the bill. "It was the miracle of technology, the computer took a simple chore and did it over and over and over," he said. The Secret Service caught them by setting up their own distributorship of illegal numbers -- a "sting operation" -- and "making controlled diliveries," Ramsey said.

Does Someone Have Your Company's Number?: Phone Hackers are Tapping PBXs, Running Up Millions in Charges

by Mark Lewyn

****

When Linda N. Paris opened the August, 1989, phone bill for Philadelphia Newspapers Inc., the telecommunications manager was stunned. On a single day, more than 6,000 calls had been placed from the telephone switch that serves the company's two papers, the "Inquirer" and the "Daily News," to numbers in Pakistan, Egypt, and the Dominican Republic--places Philadelphia reporters rarely call. During the month, such calls added up to about $90,000--nearly a quarter of the Knight-Ridder Inc. unit's entire phone bill.

Philadelphia Newspapers was a victim of a relatively new high-tech crime wave: PBX fraud. By stealing numerical passwords, thieves can tap into corporate switchboards, known as private branch exchanges, or PBXs. Once inside, they can dial anywhere-on the victim's tab. Often, the culprits are drug dealers, who use PBXs to place hard-to-trace calls. Others are shady entrepreneurs, who sell the access numbers on the streets, usually to immigrants who can't otherwise afford to call home. By the time a PBX owner realizes what's going on, there's not much chance of tracking the criminals down. "I doubt we'll ever find them," says Paris of the Philadelphia PBX hackers.

HEAVY TOLL. Dozens of companies have been hit, including Procter & Gamble, Sumitomo Bank, and Christian Broadway Network. The cost of companies could be as high as $500 million annually, estimates Rami Abuhamdeh, executive director of the Communications Fraud Control Assn., a group of phone companies and law-enforcement officials. Abuhamdeh concedes that accurate loss estimates don't exist but says: "This is one of the fastest-growing problems in the communications business."

Toll-call fraud is nothing new. Since the 1960's, for example, college students have circulated stolen calling-card numbers. But computers at American Telephone & Telegraph, MCI and U.S. Spring now alert security officials to suspected card ripoffs in as little as two hours by spotting unusual usage. And new technologies have rendered useless the "blue boxes" that "phone phreaks" once used to place free calls by mimicking the tone of network switches.

The corporate PBX is one of the last weak links. Hackers start by finding the toll-free 800 number of a particular PBX. Then, they determine the code that an employee away from the office uses to place a long distance call through the switch. According to law-enforcement officials, some thieves obtain 800 numbers and passwords by spying on executives using pay phones. Others known as "dumpster divers," ransack garbage for numerical keys to the switching systems. Some hackers use computer programs that try thousands of numbers until they hit working passwords. For kicks, they sometimes post them on electronic bulletin boards.

EVASIVE MANEUVERS. Thieves who sell the codes are a bigger problem. "Call-sell" operations, run from pay phones or out of apartments, offer illegal toll calling for a cash payment. Security officials at MCI Communications Corp. say that call-selling began in NYC but in the past year has spread to LA, Chicago, and other cities. Last April, MCI led investigators to a man and a woman in upper Manhattan whose call-sell operation ran up more than $178,000 in charges to unwitting companies. They pleaded guilty last fall to state grand larceny and computer-trespass charges.

More often, though, the lawbreakers disappear without a trace. To evade detection, they use a technique known as "looping." They break into one PBX, but instead of dialing the final destination from there, they tap into a second PBX and then complete the call. That makes it harder to track the caller. Even if they're caught, PBX hackers usually get off lightly because judges don't regard such fraud as a major crime. The two operators in New York were sentenced to perform community service.

Long-distance carriers are working with customers to keep PBX fraud from spreading. MCI has sent security tips to 250,000 corporate customers. It suggests lengthening customers. It suggests lengthening passwords, to make them harder to figure out, and blocking the PBX from making international calls if employees have little need to make them. Another tip: Shut off remote access to the PBX during nonbusiness hours.

Customers have good reason to adopt preventive measures. So far, courts have ruled that they're liable for the charges, even if their employees didn't make the calls. However, some companies have persuaded carriers to forgo charges for the stolen calls. Christian Broadcasting Network, which in 1987 was hit with $40,000 in fraudulent calls, "hasn't paid MCI anything," says Paul D. Flannigan, CBN's vice-president for information services. "I expect it to stay that way."

Still most customers have no idea how vulnerable they are to PBX fraud, carriers say. That means there is a flock of corporate pigeons ready for phone thieves to pluck.

****

The Big Bills from PBX Fraud

A Sampling of Major Losses

victim	fraudulent charges
New York City Human Resources Administration	$704,000
Procter & Gamble	300,000
Sumitomo Bank	97,000
Philadelphia Newspapers	90,000
Tenessee Valley Authority	65,000
Christian Broadcasting Network	40,000
